nVoq Partners with SyTrue on New Clinical Workflow Documentation Service for Real-Time Conversion of Physician Narratives into Categorized Data

Boulder, CO – May 12, 2015 – nVoq, a provider of cloud-based speech recognition workflow optimization solutions for the healthcare industry, today announced general availability for the company’s SayIt “Code Fast” service, available in collaboration with SyTrue. The Code Fast service provides real-time, point-of-care conversion of spoken narratives into structured data categorized with relevant ICD-9, ICD-10, SNOMED, LOINC, or other standards, using SyTrue’s Smart Data platform.

With the SayIt Code Fast service, providers can dictate narratives, and then apply one simple voice command to convert unstructured narrative data to structured, categorized text within seconds, applying their choice of coding standards such as ICD-9 or ICD-10. The structured, coded text is returned directly to the system of record for review and finalization. This unique integration of two cloud-based services saves hours of manual data entry and reconciliation effort, allowing more time for patient care and creating more accurate, complete clinical documentation.

“Like everything we do at nVoq, this solution is about improving productivity and workflow,” said Charles Corfield, Chief Executive Officer of nVoq. “The SayIt Code Fast service helps capture vital, clinical information directly at the point of care, minimizing the effort required downstream to produce properly coded documentation. This is a real benefit for provider organizations facing the challenges of ICD-10 adoption.”

“We believe voice as a data entry option provides maximum flexibility for our provider customers,” said Kyle Silvestro, Founder and Chief Executive Officer at SyTrue. “Using SayIt instead of keyboarding improves workflow efficiency, and also drives higher quality of care by unlocking information that was previously locked in unstructured formats. The SayIt solution is ideal for organizations that want to capture smart data, in real time, for their providers, support staff and patients.”

About nVoq Incorporated

nVoq Incorporated provides true cloud-based speech recognition solutions for healthcare, customer care and other industries. nVoq's SayIt solution supports both traditional narrative dictation and voice-enabled workflow automations. SayIt is available as a real time, subscription-based client application, and in SDK form for application developers wishing to voice-enable their platforms.

Headquartered in Boulder, CO, nVoq was founded in 2000 by CEO Charles Corfield, a successful entrepreneur and investor. For more information, visit <http://www.nvoq.com>.

About SyTrue

SyTrue's proprietary technologies decipher medical data, unlock its value, and convert it into usable information in real-time. SyTrue's solutions provide analytics and intelligence for enhancing patient care, optimizing health outcomes and improving services. SyTrue empowers healthcare information technology providers to use its Smart Data Platform for rapidly building, deploying, and scaling innovative solutions alongside their own applications—without complex integration.
