

Make EMRs easier
for everyone.
ANYWHERE. ANYTIME.

In healthcare, you need tools that support better patient outcomes and help increase reimbursements. Enter SayIt™ Code Fast, a new service that provides real-time conversion of spoken narratives into categorized data. The service helps improve productivity and workflow by making it easy for providers in your practice to capture vital, clinical information directly at the point of care, minimizing the effort required to produce properly coded documentation.

HOW THE SAYIT CODE FAST SERVICE WORKS

About SyTrue

SyTrue's proprietary technologies decipher medical data, unlock its value, and convert it into usable information in real-time. Its solutions provide analytics and intelligence for enhancing patient care, optimizing health outcomes and improving services. SyTrue empowers healthcare information technology providers to use its Smart Data Platform for rapidly building, deploying, and scaling innovative solutions alongside their own applications—without complex integration.

Convert narratives into categorized data in seconds

With the SayIt Code Fast service, providers can dictate narratives, and then apply one simple voice command to quickly convert unstructured narrative data to structured, categorized text, such as ICD-9, ICD-10, SNOMED, or LOINC. The structured, coded text is returned directly to the system of record for review and finalization. The service saves hours of manual data entry and reconciliation effort, allowing more time for patient care and creating more accurate, complete clinical documentation.

Why SayIt Code Fast?

The SayIt Code Fast service is a great solution for practices that need an affordable, cloud-based coding alternative. Delivered in collaboration with SyTrue, this service enables providers in your practice to:

- Capture vital, clinical information directly at the point of care
- Apply relevant ICD-9, ICD-10, SNOMED, LOINC, or other standards with a single voice command
- Provide more detail about a patient's condition to help identify possible complications, structure disease management programs if needed, and avoid possible safety issues
- Improve accuracy by shifting the focus to verifying/finalizing codes for submission (versus coding manually)
- Simplify workflow for significant time and cost savings

Get more from your EMR with SayIt

SayIt is a cloud-based speech recognition solution that converts spoken words into text within seconds. Use it for free-form dictation, front-end transcription and for navigating your EMR using voice commands or shortcuts. SayIt supports 35+ medical specialties and works with virtually any EMR (PC and Mac-based).
