

# Hamilton Medical Center Providers Record More Detailed Patient Records Faster and with Fewer Errors using SayIt

Hamilton Medical Center is the premier health care center in northwest Georgia.

*"My colleagues and I are thrilled with SayIt from nVoq! It has proven to be much more efficient and accurate than traditional typing, and I love the ability to document in greater detail in less time."*

– Dr. Jonathan Thompson, M. D.  
Emergency Department Medical Director  
Hamilton Medical Center – Dalton, GA

## Overview

Hamilton Medical Center wanted to optimize time spent treating patients in the Emergency Department (ED) while simultaneously being able to provide a more accurate and complete patient narrative.

## Objectives

- Improve caregiving efficiency
- Increase documentation quality and accuracy
- Work seamlessly with WellSoft EDS

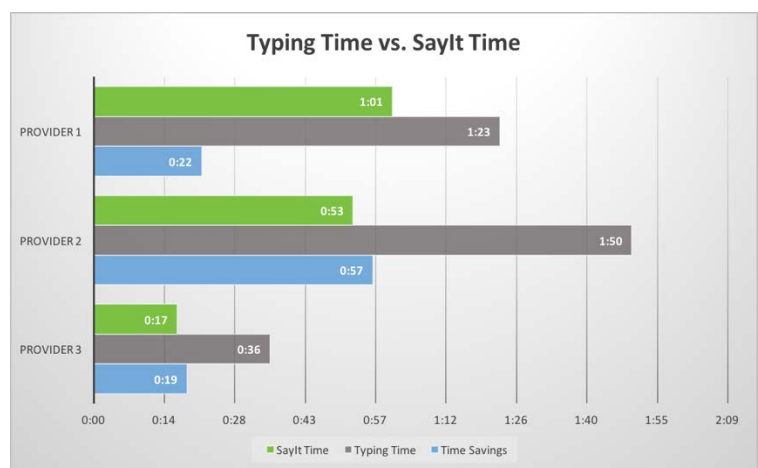

## Solution

Dr. Thompson and three of his ED staff implemented SayIt cloud-based speech recognition for eight months. Each doctor had their own SayIt account with customized vocabulary and shortcuts. Each ED PC was outfitted with a Philips SpeechMike for dictation. nVoq Shortcuts were developed to launch key clinical applications such as Soarin, Up-to-Date, and the HMC Intranet. Staff training was quick and efficient, requiring less than 30 minutes.

## Results

The providers at Hamilton Medical Center were thrilled with their results. Using SayIt from nVoq, clinicians could speak updates into the EMR faster than typing, with fewer errors, allowing more time for quality patient care.

- ✓ Doctors were 15-50% faster dictating their notes vs. typing
- ✓ There were 15-20% fewer typographical errors
- ✓ Improved patient narratives

Call today for a demo to see how SayIt from nVoq can help improve your efficiency, accuracy, and workflow.
